10x6x8 Drive/Steering

Monobox main frame with outrigger boxes integral, of high-grade close-grained steel. Four hydraulically telescoping outrigger boxes integral, or high grade close granies steel. Daimler-Benz OM 442 LA water-cooled 8-cylinder diseel engine with exhaust-type turbo-supercharger and supercharger intercooler. Output to DIN 70020: 320 kW (435 HP) at 2100

ZF-Transmatik synchromesh torque-converter main transmission plus transfer case and differential with lock-out control; electro-pneumatic gearshift; 8 speed forward in high -

Hydro-pneumatic suspension of all axles, 3 suspension systems independent of one

24-volt d.c. system. Lights to EC standards. Rubber-mounted steel-plate 2-man cab with safety-glass windows and all controls.

another; all axles hydraulically blockable. 10 x 16.00 R 25 road-lug tyres on 11.25-25 rims. All axles with single tyres. Dual-circuit semibloc mechanical steering with hydraulic booster. Service brake: air-operated dual circuit brake system, acting on all wheels. Parking brake:

spring-loaded cylinders. Continuous braking: hydraulic retarder, integral with transmission.

8 speeds forward in low — 1 speed reverse in high — 1 speed reverse in low. 1st: steering, non-driving. 2nd: steering and driving. 3rd: non-driving, non steering; 4th: steering and driving; 5th: steering and driving. All driving axles with planetary hubs. 2nd, 4th and 5th axles with differential lock-out control.

rpm. Max. torque: 1765 Nm at 1100 rpm. Fuel-tank capacity: 450 I.

Superstructure

Upper Frame Paneling Torsion-resistant weldment of high-grade close-grained steel. Sectional side panels, removable for service accessibility. Triple-row roller-bearing slew circle with external ring gear. Daimler-Benz OM 366 A water-cooled 6-cylinder in-line diesel engine. Output to DIN 70020: 119 kW (163 HP) at 2300 rpm. Max. torque 560 Nm at 1400 rpm. Fuel tank capacity: 280 I. Two variable-displacement axial-piston hydraulic pumps with automatic power control and Slew Ring Engine **Hydraulic System** one constant-displacement hydraulic pump for three hydraulic circuits and three simultaneous work motions; one constant-displacement hydraulic pump for the lowpressure servo control. Constant-displacement axial-piston hydraulic motor; hoist drum with integral planetary gearing and spring-loaded holding brake; anti-twist hoist cable.. Axial-piston hydraulic motor with planetary gearing; foot-pedal operated slewing brake and Hoist **Slewing Mechanism** spring-loaded holding brake. **Boom Luffing** One differential cylinder with pilot-controlled lowering brake valve. Control Four self-centering levers control the crane operations through hydraulic power and pilot valves. Spacious all-steel luxury cab with large folding-out windscreen, roof window, sliding door, self-contained hot-air heating unit and ventilation system, all control and monitoring Cab instruments for crane operation. instruments for crane operation. 5-section hydraulically telescoping boom, fabricated from high-grade close-grained plate stock, featuring the familiar DEMAG "ovaloid" design of rectangular box members with rounded-off corners. Each centre section slides on diagonally arranged self-centering plastic shoes. Boom head with mounting lugs for extension boom and luffing fly jib. Electronic overload cut-out (load-moment limiting device) with digital read-out for hook load. rated load, boom length, boom angle, load radius; analogous display to indicate the connective utilization; limit switches on hoist and lowering motions; pressure relief and safety. Main Boom **Safety Devices** capacity utilization; limit switches on hoist and lowering motions; pressure-relief and safety holding valves. **Optional Equipment**

Braking system to EC standards.

10x8x8 Drive/Steering 1st, 2nd, 4th, and 5th axles: driving and steering, with planetary hubs; 3rd axle: non-driving. non-steering. Steering of 4th and 5th axles independent of 1st and 2nd axles. The non-steering 3rd axle **Crab-Steering Feature** can be raised hydraulically. 12-t capacity; plus air-brake coupling and socket. 16.00 R 25 off-the-road tyres on 11.25-25 rims. **Tow Coupling** Tyres Secondary Hoist Constant-displacement axial-piston hydraulic motor; hoist drum with integral planetary gearing and spring-loaded holding brake (avoids re-reeving of hoist line when using the optional extension boom or fly jib); anti-twist hoist cable. Hydraulically operated pin-lock system for the telescoping boom sections. Permitting to lift loads of up to 130/150 t (75%/85%). Boom Pin-Lock System Heavy-Lift Accessories Additional Counterweight 13-10-t additional counterweight. Superlift Attachment The Superlift attachment is a simple means to increase the lifting capacity of the normal crane. It essentially consists of a boom suspension mast with guy ropes, which provides for an automatic rope-length adjustment for boom telescoping, a boom pin-lock system, and a 13-ton Superlift counterweight. The suspension mast is lowered to the main boom when not needed, or for road transport. The Superlift counterweight is deposited hydraulically, without the use of an auxiliary crane. Telescoping 10-17 m side-folding 2-part lattice-type extension boom; with adapter to permit Extension Boom an angular adjustment to 15° and 30° Non-Luffing Fly Jib Fixed, non-folding lattice-type fly jib in lengths of 12 m, 18 m, 24 m, and 30 m (using components of the luffing fly jib). Angular adjustment to 3° and 20°. Lattice-type, in lengths from 18-36 m, with luffing mast, ropes, electrical equipment, and Luffing Fly Jib safety devices; (the 2nd hoist drum will be required when using the luffing fly jib).

Die Werte über der Trennlinie basieren auf Bauteilefestigkeit, die Werte unterhalb der Trennlinie auf Standsicherheit. All capacities above the parting line are based upon structural strength. The capacities below the parting line are based on stability.

Les charges au-dessus de la ligne séparatrice se basent sur la résistance du matériau. Les charges au-dessous de cette ligne se basent sur la stabilité.

Anmerkungen über Tragfähigkeiten **Crane-Capacity Notes** Conditions d'utilisation

Tragfähigkeiten überschreiten nicht 85%/75% der Kipplast.

Tragfähigkeiten 75% entsprechen DIN 15019.2 (Prüflast = 1,25 x Hublast + 0,1 x Auslegergewicht, auf die Auslegerspitze reduziert).

Das Gewicht der Unterflanschen, sowie die Aufnahmemittel, sind Bestandteile der Last und sind von den Tragfähigkeitsangaben abzuziehen.

Kranbetrieb zulässig bis: Weitere Angaben über höhere Windlastgeschwindigkeiten in der Bedienungsanleitung des Kranes. Gross capacities do not exceed 85%/75% of tipping load.

The 75% ratings are in conformance with DIN 15019.2 (test load = 1.25 x lifting load + 0.1 dead weight of boom reduced to boom point).

The weight of the hook block and all other load-handling devices is considered part of the load, and suitable allowance therefor should be made.

Crane can still operate safely up to a and a Wind Speed of 9.8 m/s

Consult operation manual for further particulars and higher wind speeds.

Les charges indiquées n'excèdent pas 85%/75% de l'effort de renversement.

Les charges de la colonne 75% sont conformes à DIN 15019.2 (charge d'essai = 1,25 x charge d'utilisation + 0,1 x poids propre de la flèche réduit à la tête de celle-ci).

Les poids du crochet mouflé et de tous les accessoires necessaires pour accrocher la charge fait partie de celle-ci et est à déduire des charges d'utilisation.

La grue peut travailler en charge jusqu'à

des vents de 60 N/m² Pour plus de détails et plus fortes pressions du vent consulter la Notice de Conduite de la grue.
