TRANSMISSION

Allison DP-8963, Planetary type, full automatic shift. Integral torque converter with automatic lock-up to lock-up shifting in all ranges. Remote mounted, 6 forward speeds, 1 reverse. Allison Transmission Electronic Control provides park brake interlock and hoist interlock as well as built in diagnostics.

Maximum Speeds @ Governed Engine Speed with standard 24.00x49 tires

	Gear	Star 3.73 Diff	ndard erential	Opt 3.15 Diff	tional erential

Loaded	33%	67%

STEERING SYSTEM

Closed-center full time hydrostatic power steering system using two double-acting cylinders, piston type pump and brake/steering system reservoir. Accumulator provides supplementary steering

in accordance with SAE J1511, ISO 5010.

Steering Angle			38°	
Turning Diameter (SAE)	m	ft in	22,65	74'4"
Steering Pump Output				
(@ 2100 rpm)	l/m	gpm	91	24
System Operating Pressure	kPa	psi	17 238	2,500

HYDRAULIC SYSTEM

Two (2) Euclid two-stage cylinders, double-acting in second stage, internal dampened, inverted and outboard mounted. Separate Hoist/Brake Cooling reservoir and independent tandem gear pump. Control valve mounted on reservoir cable operated.

Body Raise Time	S		13	
Body Float Down Time	S		17	
Brake Cooling Pump Output	I/m	gpm	455	120
Hoist Pump Output	I/m	gpm	455	120
System Relief Pressure	kPa	psi	17 238	2,500

BRAKE SYSTEM

Brake systems comply with SAE J1473 and ISO 3450.

Service

All-hydraulic actuated front disc brakes with two calipers per front disc. Calipers are internally ported, each containing three pairs of opposing pistons. Rear brakes are oil-cooled wet discs. Front Axle - Dry Disc

Tront Hate Bry Bloc					
Disc Diameter Each (2 discs/ax	le)cm	in	101.6	40	
Brake Surface Area Per Axle	cm ²	in ²	14 194	2,200	
Lining Area Per Axle	cm ²	in ²	4 129	640	
Brake Pressure (Max.)	kPa	psi	13 790	2,000

Brake Surface Area Per Axle	cm ²	in ²	79 243	12,282	
Brake Pressure (Max.)	kPa	psi	10 515	1,525	
Secondary				8	

Two independent circuits within the service brake system provide back-up stopping capability. System is manually or automatically applied to stop machine within prescribed braking distance.

Parking

Drum, two shoe internal expanding type mounted behind transmission. Automatically applied if hydraulic pressure is lost. Manually controlled from shift console.

Size	mm	in	438 x 102	17 1/4 x 4
Lining Area	cm ²	in ²	1 226	190
Retarder				

Foot-operated valve controls all-hydraulic actuation of oil-cooled wet disc brakes on rear axle. System provides constant speed control on downhill hauls.

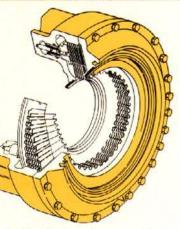

Capacity (Continuous)	kW	bhp	950	1,275
Capacity (Intermittent)	kW	bhp	1805	2,420

The Euclid R85B is equipped with an all-hydraulic actuated braking system providing precise braking control and quick system response. The brake control valve is actuated directly at the brake pedal. The controller has a unique variable front to rear brake proportioning that maximizes the stopping performance under slippery road conditions without having to deactivate front brakes.

WET DISC BRAKE

The Euclid wet disc brake is engineered for long service life even in the most extreme environments. The wet disc brakes are located on the rear axle and provide service braking, secondary braking and retarding. The brakes are of a multi-plate design and continuously oil-cooled. The sealed design protects against environmental contamination for prolonged service life. The wet disc brake is designed with

automatic retraction and self-adjusting features to prevent drag and compensate for wear. Separate pedals activate the service braking and retarding functions.

CAB ROPS/FOPS

Structurally Sound. Command Cab II, double-wall construction of 11 gauge inner and outer steel panels, lends itself to a more structurally sound cab. Foam rubber lining material along with foam rubber-backed carpeting and multiple layered floor mat act to absorb sound and control interior temperature. A three-point rubber iso-mount arrangement to the deck surface minimizes vibration to the operator's compartment. The R85B is designed and originally manufactured to meet OSHA sound limitations at the operator's station with windows and vents closed under normal conditions. Featuring an integral ROPS (Rollover Protective Structure) manufactured by Euclid in accordance with SAE J1040, ISO 3471, FOPS SAE J231 and ISO 3449. Operator and trainer seat belt in accordance with SAE J386 and ISO 6683.

Ease of Operation and Systems Monitoring.

A wrap-around style dashboard positions the controls within easy reach and visual contact. A full complement of easy-toread, color-banded gauges with international symbols and centrally positioned tachometer, speedometer and bank of warning lights provide the operator information required to safely pilot the machine.

Excellent Serviceability. A removable front closure allows easy access to electrical components, service brake valve, retarder valve, and washer bottle. All electrical junction points are located in the front compartment. The upper dash utilizes four (4) removable panels to house gauges and customer options, with each individually accessible.

Designed for Operator Comfort. Command Cab II standard equipment includes a six-way adjustable mechanical seat, tilt steering wheel, filtered ventilation and a fully upholstered trainers seat that folds down to reveal a tray for lunch boxes and other gear.

Page 4

SUSPENSION

Front and Rear Suspension

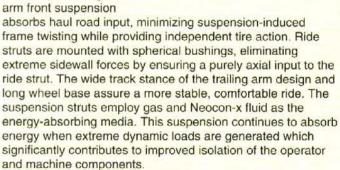

Independent trailing arm for each front wheel. Neocon struts containing energy-absorbing gas and compressible Neocon-x fluid mounted between trailing arm and frame. The cast rear axle housing has a parallel link mounting with an A-Frame top member. Provides a reduced "roll-steer" effect which results in a more stabilized ride and contributes to lower overall frame stress levels. Rear mounted Neocon struts suspend drive axle from frame. Neocon struts provide variable damping and rebound feature.

The Euclid frame and suspension are designed to work in unison to provide maximum structural integrity and operator comfort.

The formed rectangular frame rail construction provides superior resistance to bending and torsional loads while eliminating unnecessary weight. Euclid achieves long frame fatigue life through proven design and manufacturing

practices. Smooth frame transitions minimize stress concentrations and steel castings effectively distribute input loads. Frame life is further enhanced by utilizing fatigue resistant weld joints and locating welds in low stress areas. The unique trailing arm front suspension

FRAME			

Formed rectangular rails with section height tapered from rear to front, bridged by four cross members, front bumper and front suspension tube. Cross member to frame junctions use large radii to minimize stress. Frame utilizes 310 N/mm² **45,000 psi** yield strength steel.

INSTRUCTIONS:

Diagonal lines represent total resistance (Grade % plus rolling resistance %). Charts based on 0% rolling resistance, standard tires and gearing unless otherwise stated.

- 1. Find the total resistance on diagonal lines on right-hand border of performance or retarder chart.
- 2. Follow the diagonal line downward and intersect the NMW or GMW weight line.
- NOTE: Photos and illustrations throughout may show optional equipment.
- From intersection, read horizontally right or left to intersect the performance or retarder curve.
- 4. Read down for machine speed.

Under our policy of continuous product improvement, we reserve the right to change specifications and design without prior notice. The Illustrations do not necessarily show the standard version of the machine.
