

WHITE FREIGHTLINER

SINGLE-DRIVE TRACTOR

EACH ONE BUILT LIKE IT'S THE ONLY ONE YOU OWN.

model WFT 6342T Single-Drive **tractor.**

Someday, if you could watch your White Freightliner being built, you'd see how much of you gets built into it. The single-drive tractor is custom-built — not just for the kind of job you do, but for the kind of guy you are. So along with all the premium lightweight features you really need, you can get all the comfort you really want. And you get it all when we say you'll get it. We can give you a firm factory delivery date, and come hell or high water, we do everything possible to stick to it. Your single-drive tractor will pay off with big payloads, with reliability and comfort and handling ease. And with features — like the 90° Tiltline sleeper cab — that make it a cinch to service. And come trade-in time, it'll pay off again in premium trade-in values. And there are plenty of dealer records to prove that.

WFT 6342T Single Drive Tractor features.

anodized grille

The one-piece aluminum grille is chemically polished and anodized, for a long-lasting, like-new appearance. It's attached by only six bolts, so you can quickly clear the way to all up-front service points.

flat windshield

The two-piece flat windshield offers an undistorted view. And easy, inexpensive replacement.

grab handles

High quality cast aluminum grab handles are located on the cab front, to help you up to the windshield. And on each side is a large stainless tube mounted with an aluminum bracket to help you into the seat.

swing down dash

Dash panels swing down a full 180 degrees, so it's simple to service gauges, relays, circuit breakers, plumbing and wiring.

grade 8 bolts

For all frame attachments in high stress areas, we use S.A.E. grade 8 bolts and hardened steel washers, nothing less.

fuel tanks

Aluminum fuel tanks are built in a wide range of capacities, with baffles, where required to reduce surging, and a sump to drain condensation and contaminants. Six inch wide aluminum support bands are double bolted to hanger brackets for security.

Optional equipment shown
available upon request.

WFT 6342T Single Drive Tractor
features.

12-piece cab

The semi-monocoque cab uses twelve aluminum panels lap-fastened with rivets into one rigid self-supporting skin. No heavy box sections or brackets here. Damage a panel, and it's a cinch to replace.

solid connectors

Solid rods connect the throttle and engine, clutch pedal and clutch, gear shift and transmission. More reliable installations than cable, hydraulic or air connections.

radiator

Top and bottom tanks, baffle, and side channels are all aluminum. So are the mounting brackets. Dismounting? Simply disconnect water hoses and remove four bolts. It's that easy.

frontal air induction

It's 15 to 40 pounds lighter than any other system of comparable size and capacity. And air flow resistance is lower. And who else offers up to 150,000 miles or one year between filter changes under normal operating conditions? (Providing restriction does not exceed engine manufacturer's limits).
